React – Ex – Component Life Cycle

1. Create a Parent comp with a text box of user id.
   The id will pass to a child component that will present that user's 5 first tasks titles from https://jsonplaceholder.typicode.com/todos in a list

2. Create a "Movies" component that render the first 10 "movie" child components based on the data pulled from https://api.tvmaze.com/shows

   Each "movie" component get an id from his parent and present it's name and Picture (pulled from image.medium key)
